

Metabolomics workshop

June 29, 2018

MRC Cancer Unit

University of Cambridge

This workshop provided the ESRs with the basic principles of metabolomics, and covered aspects such as experiment design, overview of the different platforms, and techniques. We also gave the ESRs the possibility to perform the extraction of blood metabolites from blood standard, to run the samples and to identify and quantify specific metabolites. All the ESRs were particularly excited by the possibility of running their own samples using a state-of-the-art platform and I am sure they now have a better idea of how a metabolomic experiment works.

Dr. Christian Frezza, MRC Cancer Unit, University of Cambridge
